

## GitHub Guide

### Basic Commands

To access the repository:

**cd prediction-lol**

To create a new branch:

**git checkout -b branch\_name**

This will create a new branch based off the master branch saved on your computer. If your master branch is not updated, look on the bottom for what to do.

To switch branches:

**git checkout branch\_name**

To add all changes that you have made:

**git add .**

To delete some of the changes you are trying to add

**git reset change\_you\_want\_to\_delete**

To commit these changes:

**git commit**

After committing:

1. Press I to write a short description of your changes. **MUST BE DONE**
2. To save and quit: Press :wq

To push these changes onto your branch:

**git push**

To pull material off the master branch:

**git fetch**

**git checkout master**

**git pull**

**DO THIS BEFORE YOU CREATE A NEW BRANCH!!!**
